

## Internet Resources for The Climate Reality Leadership Corps Virtual Trainings

Climate Reality Leadership Corps trainings are free, but participants in our virtual trainings must provide their own internet-enabled device (computer, tablet, mobile device, etc.) and internet connection. We recognize that internet accessibility varies by location and have compiled a few resources that we hope will be helpful for participants in some of our [international branch](#) and [US chapter](#) locations.

Please note that the below resources are not exhaustive – there are many internet service providers (ISPs) and internet access options out there. Climate Reality has not used or tested these resources and cannot guarantee how reliable they will be or how companies may change their options, prices, and policies over time. Climate Reality does not have relationships with any company on this list, and a company’s inclusion is not an endorsement by Climate Reality. These resources are intended as a starting point to make attendees aware of some of the internet options in their areas. We recommend you consider your personal internet needs and do some additional research into the providers and policies for your home country or locality.

To get started, here are a few general tips for [maximizing your internet connection](#).

<b>Angola</b>
<ul style="list-style-type: none"><li>• Accessibility varies widely. A few options include:<ul style="list-style-type: none"><li>○ <a href="#">Angola Telecom</a></li><li>○ <a href="#">Telecom Namibia</a></li></ul></li></ul>
<b>Brunei</b>
<ul style="list-style-type: none"><li>• Internet access is widely available. Speed varies.<ul style="list-style-type: none"><li>○ <a href="#">BruNet</a> is one ISP option</li></ul></li></ul>
<b>Australia</b>
<ul style="list-style-type: none"><li>• National Broadband Network (<a href="#">nbn</a>; not an ISP, builds the infrastructure for broadband internet)<ul style="list-style-type: none"><li>○ Check coverage area <a href="#">here</a>.</li><li>○ Check list of compatible phone/internet providers <a href="#">here</a>.</li></ul></li><li>• A few ISP possibilities that also offer financial hardship assistance:<ul style="list-style-type: none"><li>○ <a href="#">Optus</a></li><li>○ <a href="#">Telstra</a></li><li>○ <a href="#">Vodafone</a></li></ul></li></ul>

## Brazil

- Government program to [set up free broadband internet in vulnerable communities](#), especially telecentres, schools, health units, Indigenous villages, border posts, and quilombos.
  - No estimate provided for how long this may take.
- These [providers](#) were ranked most accessible by the National Telecommunications Agency (Anatel).
- List of some additional [internet service providers in Brazil](#).
  - If you do not already have an ISP, you may be able to find one near you on this list and ask them if they have any coronavirus or limited-income assistance.
  - A few ISPs with coronavirus assistance:
